20120911 TI-Alex Note: Although there is no pulse-overlap in 1-phase mode, during USR, the pulse comes in immediately.
So, the problem with PR504 = DNP is that if there is a high ripple, and USR is faultily detected, you will get a double-pulse.
So, we want to make sure USR is not active if it is not necessary. So, I moved it all the way to highest level so PR504 works to 8.87k.
