C	K42F	1.0

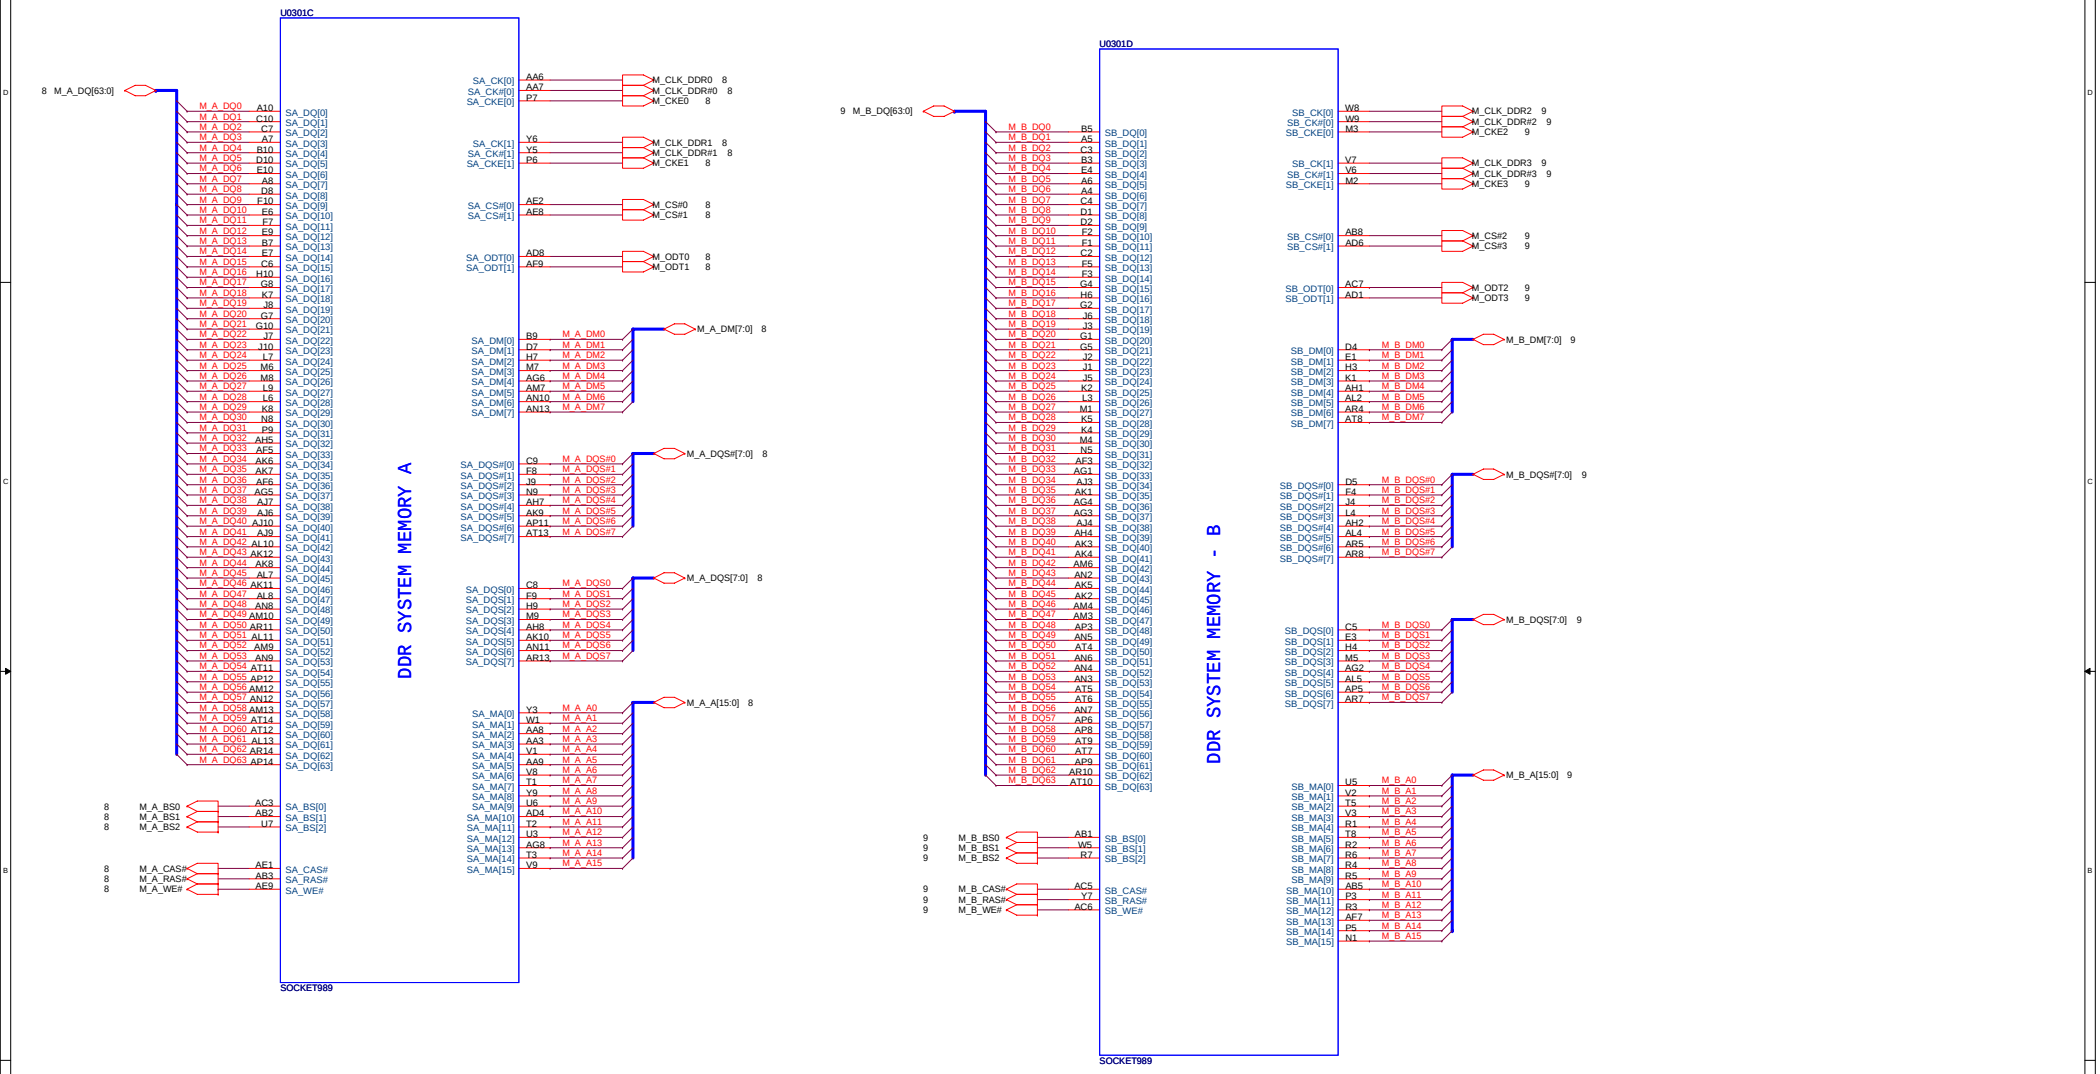
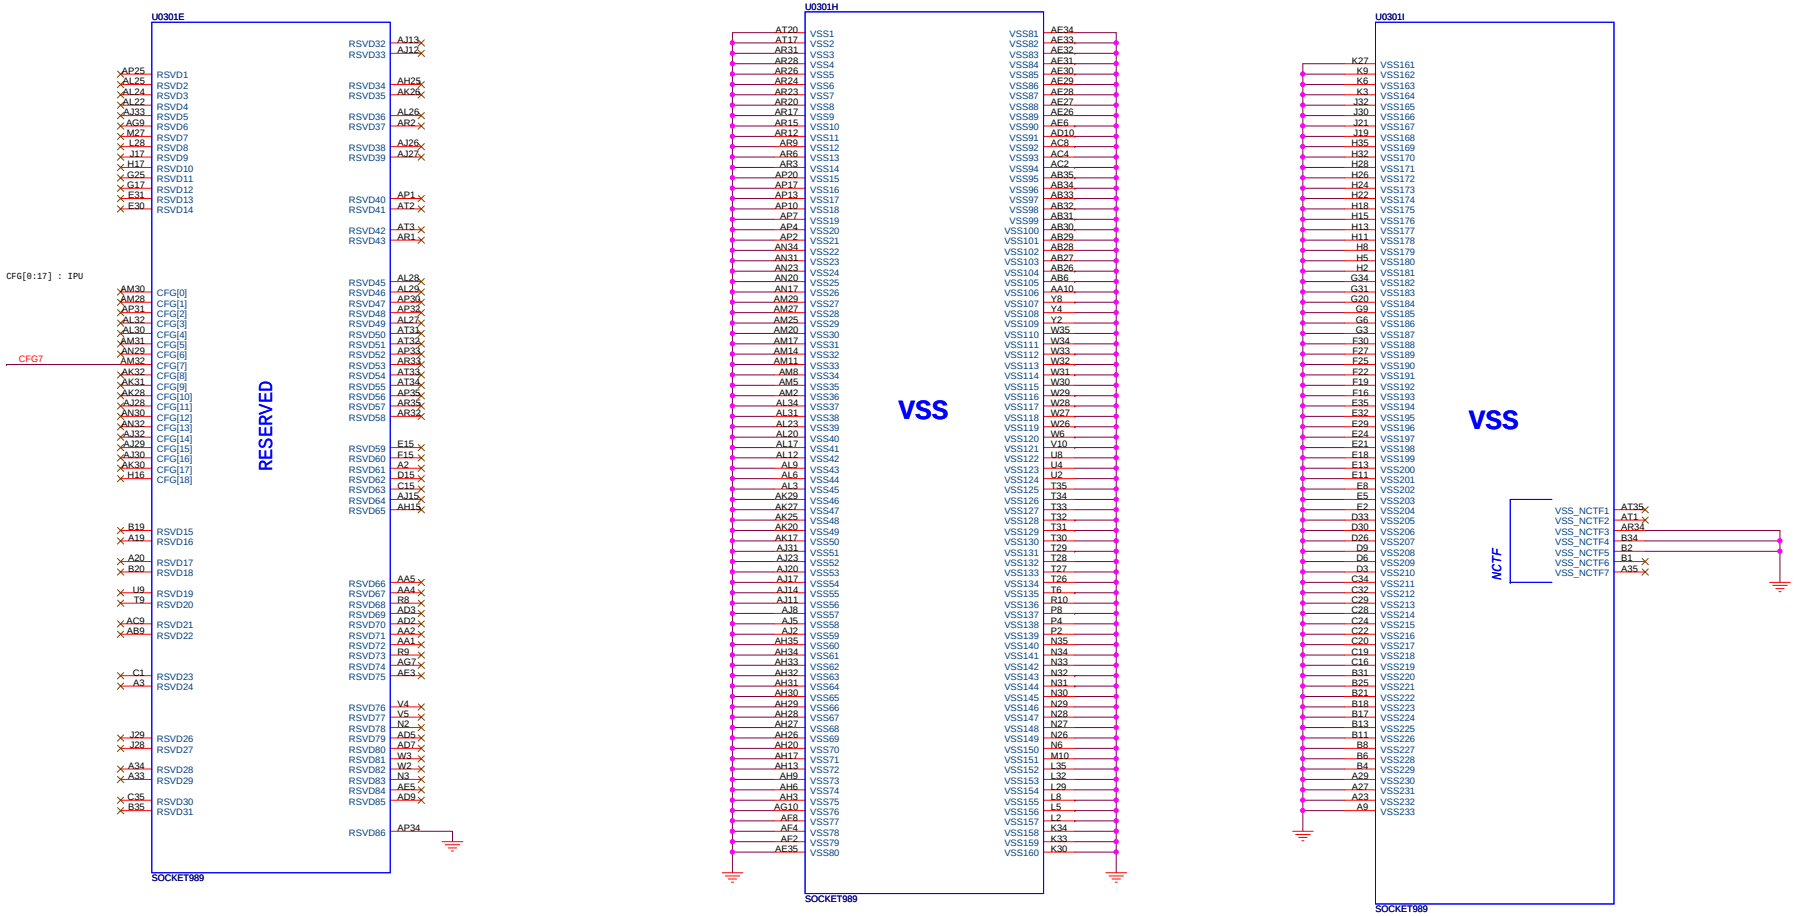
Date: Thursday, November 12, 2009 Sheet 3 of 59



ASUSTeK COMPUTER INC. NB1	Title : CPU(2)_DDR3	
	Engineer: Modim Zhang	
Size: C	Project Name: K42F	Rev: 1.0
Date: Thursday, November 12, 2009	Sheet 4 of 59	



CFG strapping information:

CFG[1:0]: PCI Express Port Bifurcation:(Clarksfield Only)
- 11 = 1 x 16 PEG (Default)
- 10 = 2 x 8 PEG

CFG[3]: PCIE Static Numbering Lane Reversal.(Arrandale Only)
- 1:Normal Operation (Default)
- 0:Lane Numbers Reversed 15 -> 0, 14 -> 1, ...

CFG[4]: Embedded DisplayPort Detection.(Arrandale Only)
- 1:Disabled - No Physical Display Port attached to Embedded DisplayPort
- 0:Enabled - An external Display Port device is connected to the Embedded Display Port

CFG[7]: Fixed for PCI Express 2.0 jitter specifications.(Clarksfield)
Clarksfield (only for early samples pre-ES1) - Connect to GND with 3.01K Ohm/5% resistor
For a common motherboard design (for AUB and CFD),
the pull-down resistor should be used. Does not impact Arrandale functionality.
Unmount if Intel has fixed this issue.

Note: (Auburndale)Hardware Straps are sampled on the asserting edge of VCCPWRGOOD_0 and VCCPWRGOOD_1 and latched inside the processor.

Note: (Clarksfield)Hardware Straps are sampled after RSTIN# de-assertion.

CFG strapping information:

For Arrandale

CFG[2:0] - Reserved configuration pins. Test points may be placed on these pins on a common motherboard design.
CFG[3] – PCI Express* Static Lane Numbering Reversal. Lane Reversal will be applied across all 16 Lanes.
- 1: No lane reversal
- 0: Reversal

CFG[4] - Embedded DisplayPort Detection: This is used to detect the presence of a device on the Embedded DisplayPort.
CFG[17:5] - Reserved configuration pins.
Note: Hardware straps are sampled on the asserting edge of VCCPWRGOOD_0 and VCCPWRGOOD_1 and latched inside the processor.

For Clarksfield

CFG[1:0] - PCI Express* Port Bifucation:
- 11 = 1 x16 PEG
- 10 = 2 x8 PEG

CFG[2] - Reserved Configuration pin.
CFG[3] – Reserved (Used by Arrandale Pporcessors for PCI Express* Static Lane Numbering Reversal)
CFG[11:4] - Reserved configuration pins.
CFG[12] - N/A on Clarksfield processors.
CFG[17:13] - Reserved configuration pins.
Note: Hardware straps are sampled after RSTIN# de-assertion.

Table 2-28. Functional Strap Definitions (Sheet 1 of 5)

Signal	Usage	When Sampled	Comment
SPKR	No Reboot	Rising edge of PWROK	The signal has a weak internal pull-down. Note: the internal pull-down is disabled after PLTRST# de-asserts. If the signal is sampled high, this indicates that the system is strapped to the "No Reboot" mode (the PCH will disable the TCO Timer system reboot feature). The status of this strap is readable using the NO REBOOT bit (Chipset Config Registers: Offset 3410h:bit 5).
INIT3_3V#	Reserved	Rising edge of PWROK	This signal has a weak internal pull up. Note: the internal pull-up is disabled after PLTRST# de-asserts. **NOTE:** This signal should not be pulled low.
GNT[3]#/ GPIO[55]	Top-Block Swap Override	Rising edge of PWROK	The signal has a weak internal pull-up. Note: the internal pull-up is disabled after PCIRST# de-asserts.If the signal is sampled low, this indicates that the system is strapped to the "topblock swap" mode (the PCH inverts A16 for all cycles targeting BIOS space). The status of this strap is readable using the Top Swap bit (Chipset Config Registers:Offset 3414h:bit 0). Note that software will not be able to clear the Top-Swap bit until the system is rebooted without GNT3# being pulled down.
INTVRMEN	Integrated 1.05 V VRM Enable / Disable	Always	Integrated 1.05 V VRM is enabled when high. **NOTE:** This signal should always be pulled high.

Table 2-28. Functional Strap Definitions (Sheet 2 of 5)

Signal	Usage	When Sampled	Comment
GNT1# / GPIO51	Boot BIOS Strap bit [1] BBS[1]	Rising edge of PWROK	This signal has a weak internal pull-up. Note that the internal pull-up is disabled after PCIRST# de-asserts. This field determines the destination of accesses to the BIOS memory range. Also, controllable using Boot BIOS Destination bit (Chipset Config Registers:Offset 3410h:bit 11). This strap is used in conjunction with Boot BIOS Destination Selection 0 strap. **Bit11 / Bit 10 / Boot BIOS Destination** 0 1 Reserved 1 0 PCI 1 1 SPI 0 0 LPC **NOTE:** If option 00 LPC is selected, BIOS may still be placed on LPC; however, all platforms with the PCH require SPI flash connected directly to the PCH SPI bus with a valid descriptor in order to boot. **NOTE:** Booting to PCI is intended for debut/testing only. Boot BIOS Destination Select to LPC/PCI by functional strap or using Boot BIOS Destination Bit will not affect SPI accesses initiated by Intel® Management Engine or Integrated GbE LAN.

Table 2-28. Functional Strap Definitions (Sheet 5 of 5)

Signal	Usage	When Sampled	Comment
SDVO_CTRLDATA	Digital Display Port (Port B)	Rising Edge of PWROK	This signal has a weak internal pull-down. Note that the weak internal pull-down is disabled after PLTRST# de-asserts. Port B is enabled when sampled high. When sampled low Port B is Disabled.
DDPC_CTRLDATA	Digital Display Port (Port C)	Rising Edge of PWROK	This signal has a weak internal pull-down. Note that the weak internal pull-down is disabled after PLTRST# de-asserts. Port C is enabled when sampled high. When sampled low Port C is Disabled.
DDPD_CTRLDATA	Digital Display Port (Port D)	Rising Edge of PWROK	This signal has a weak internal pull-down. Note that the weak internal pull-down is disabled after PLTRST# de-asserts. Port D is enabled when sampled high. When sampled low Port D is Disabled.

Table 2-28. Functional Strap Definitions (Sheet 3 of 5)

Signal	Usage	When Sampled	Comment
GNT[0]#	Boot BIOS Strap bit[0] BBS[0]	Rising edge of PWROK	This Signal has a weak internal pull-up. Note that the internal pull-up is disabled after PCIRST# de-asserts. This field determines the destination of accesses to the BIOS memory range. Also, controllable using Boot BIOS Destination bit (Chipset Config Registers:Offset 3410h:bit 10). This strap is used in conjunction with Boot BIOS Destination Selection 1 strap. **Bit11 / Bit 10 / Boot BIOS Destination** 0 1 Reserved 1 0 PCI 1 1 SPI 0 0 LPC **NOTE:** If option 00 LPC is selected, BIOS may still be placed on LPC; however, all platforms with the PCH require SPI flash connected directly to the PCH's SPI bus with a valid descriptor in order to boot. **NOTE:** Booting to PCI is intended for debut/testing only. Boot BIOS Destination Select to LPC/PCI by functional strap or using Boot BIOS Destination Bit will not affect SPI accesses initiated by Management Engine or Integrated GbE LAN.
GNT2#/ GPIO53	ESI Strap (Server Only)	Rising edge of PWROK	This Signal has a weak internal pull-up. Note that the internal pull-up is disabled after PCIRST# de-asserts. Tying this strap low configures DMI for ESI compatible operation.. **NOTE:** ESI compatible mode is for server platforms only. This signal should not be pulled low for desktop and mobile.
NV_ALE	Reserved	Rising edge of PWROK	This signal has a weak internal pull down. **NOTE:** This signal should not be pulled high.

Table 2-28. Functional Strap Definitions (Sheet 4 of 5)

Signal	Usage	When Sampled	Comment
HDA_DOCK_EN#/GPIO[33]	Flash Descriptor Security Override/ ME Debug Mode	Rising edge of PWROK	Signal has a weak internal pull-up. If strap is sampled high, the security measures defined in the Flash Descriptor will be in effect (default). If sampled low, the Flash Descriptor Security will be overridden. This strap should only be asserted low using external pull down in manufacturing/ debug environments ONLY. **NOTE:** Asserting the GPIO33 low on the rising edge of PWROK will also halt Intel® Management Engine after chipset bringup and disable runtime Intel® Management Engine features. This is a debug mode and must not be asserted after manufacturing/debug.
SPI_MOSI	TPM Functionality Disable	Rising edge of MEPWROK	This signal has a weak internal pull-down resistor. This signal must be sampled low.
NV_CLE	DMI Termination Voltage	Rising edge of PWROK	This signal has a weak internal pull-down.
HDA_SDO	Reserved	Rising edge of RSMRST#	This signal has a weak internal pull down. **NOTE:** This signal should not be pulled High
GPIO8	Reserved	Rising edge of RSMRST#	This signal has a weak internal pull up. Note that the weak internal pull-up is disabled after RSMRST# de-asserts. **NOTE:** This signal should not be pulled low.
GPIO27	Reserved	Rising edge of RSMRST# pin	This signal should be left as a No Connect.
HDA_SYNC	On-Die PLL Voltage Regulator Voltage Select	Rising edge of RSMRST# pin	This signal has a weak internal pull down. On-Die PLL VR is supplied by 1.5 V when sampled high; 1.8 V when sampled low.
GPIO15	Reserved	Rising edge of RSMRST# pin	Low = Intel® Management Engine Crypto Transport Layer Security (TLS) cipher suite with no confidentiality. High = Intel® Management Engine Crypto TLS cipher suite with confidentiality. This signal has a weak internal pull down. **NOTE:** A strong pull up may be needed for GPIO functionality.
L_DDC_DATA	LVDS	Rising Edge of PWROK	This signal has a weak internal pull-down. Note that the weak internal pull-down is disabled after PLTRST# de-asserts. LVDS is enabled when sampled high. When sampled low LVDS is Disabled.

From CLK BUFFER
Clock Flex
IBEXPEAK-M
DG2.0 P241
When unused, CL_CLK1, CL_DATA1 and CL_RST1# may be left unconnected.
Update 11/09 R2.0
Q2801A UM6K1N
Q2801B UM6K1N
Q2802A UM6K1N
Q2802B UM6K1N
Note: Place these resisters near to PCIe Slots
PCH CLKREQ Setting:
Not connected to device.
If not use crystal,please change C1201 to 0 OHM
R2120: For Xtal measurement
DG2.0
Section 4.2.4.1: Added 25-MHz Crystal routing guideline. All Mobile Intel 5 Series Chipset-based Integrated Graphics platforms are required to use a 25-MHz crystal on the PCH XTAL25_IN/OUT to enable the PCH to generate the display clocks. Display Clock generation is integrated into the PCH.
Integrated Graphics platforms that implement DVI/DP/HDMI/e-DP are required to use Display Clock Integration (DCI) (25M crystal to generate PCH display clocks) to improve signal integrity and mitigate risk of electrical compliance and associated functional failures
WW35 Update:Integrated Graphics platforms that use onlyLVDS and/or VGA Displays may use Buffer Through Mode (BTM) and leave 25-MHz crystal and RC components unstuffed

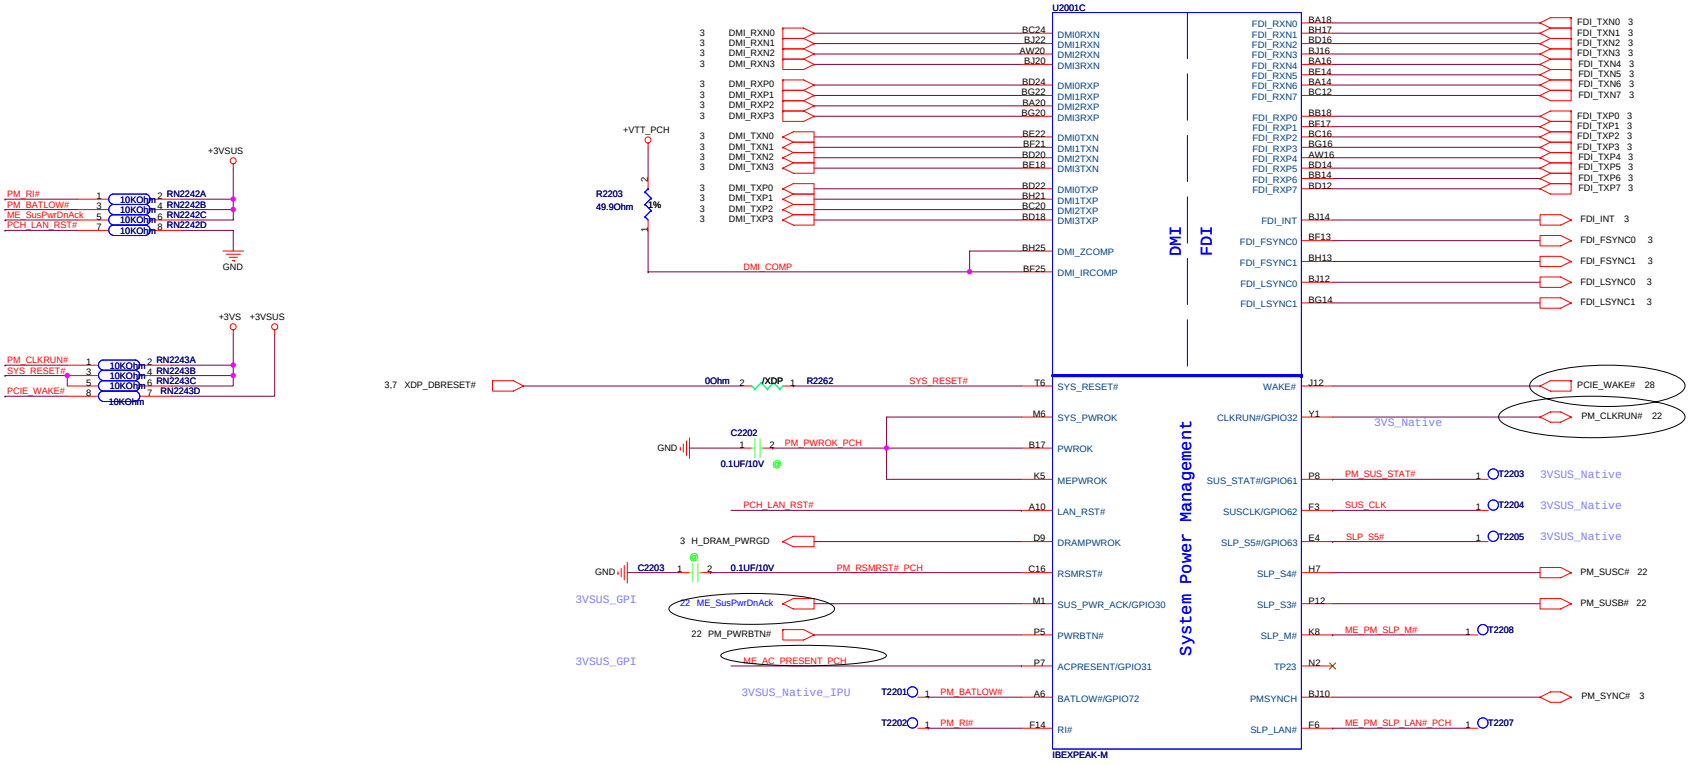
pre-ES1 not support
Reversal Feature



R1.1,item L15

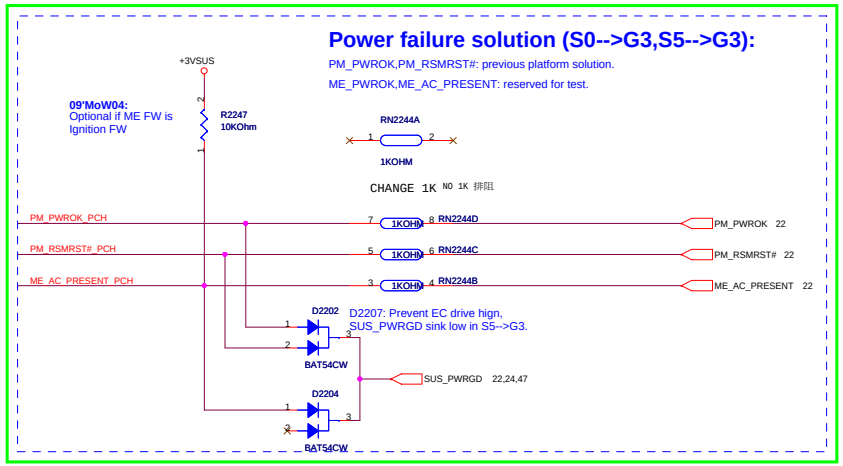


Table 112. Intel ME-EC Interaction Signal List with and without M3 Support

Signal Name	Platform with M3 Support (e.g., Intel® AMT)	Platform without M3 Support (e.g., Intel® ME Ignition Firmware)
SUS_PWR_DN_ACK (GPIO30)	Required	Required
ACPRESENT (GPIO31)	Required	Required **Note:** Optional if Intel ME FW is Intel® ME Ignition Firmware
SLP_M#	Required	Optional (Tie to SLP_S3#) **Note:** If SLP_S3# is not routed from PCH to EC, then SLP_M# becomes required from Intel® ME-EC perspective.
SLP_S3#	Optional	Required **Note:** If SLP_M# is routed from PCH to EC, then SLP_S3# can be optional from Intel ME-EC perspective

NOTE: Optional means that these signals are optional from Intel ME-EC interaction point of view. However, they are platform critical signals and are still required to be routed on the platform.

ME Ignition Firmware is for 2MB SPI core, only PM55 can support on it.

1. I/P Current:	
I in = Vo*Io/(0.8 * Vin) =1.375A	
2. Ripple Current:	
I rip =1.152A	
I spec=2.5A ×1 pcs	
3. Dynamic:	
Ipeak=(vin-vo)*D/(L*Fsw)=1.55A	
ESR / 1 pcs =15mohm	
△V =23.25mV	
3. Inductor Spec:	
I sat=10 A	
I dc =5.5 A	
DCR=37 mohm	
4. MOSFET Spec:	
H-side MOSFET: EMB20N03V	
Rds(ON)= 23 mohm	(Vgs=4.5 V)
I cont = 8 A	(T =25 ℃)
I peak = 32A	(Pause <10 us)
L-side MOSFET: EMB20N03V	
Rds(ON)= 23 mohm	(Vgs=4.5 V)
I cont = 8 A	(T =25 ℃)
I peak = 32 A	(Pause <10 us)

Power stage	+5VSUS
1. I/P Current:	
I in = Vo*Io/(0.8 * Vin) =2.082A	
2. Ripple Current:	
I rip =1.012A	
I spec=2.5A ×1	
3. Dynamic:	
Ipeak=(vin-vo)*D/(L*Fsw)=2.58A	
ESR / 1 pcs =15 mohm	
△V =38.72mV	
3. Inductor Spec:	
I sat=10 A	
I dc =5.5 A	
DCR=37 mohm	
4. MOSFET Spec:	
H-side MOSFET: EMB20N03V	
Rds(ON)= 23 mohm	(Vgs=4.5 V)
I cont = 8 A	(T =25 ℃)
I peak = 32A	(Pause <10 us)
L-side MOSFET: RJK0355DPA-00-J0 WPAK	
Rds(ON)= 11.8 mohm	(Vgs=4.5 V)
I cont = 30 A	(T =25 ℃)
I peak = 120 A	(Pause <10 us)

Controller	+3VSUS
1. Voltage & Current:	
+3VSUS=3.3V@3A	
2. Frequency:	
fosc=375KHz	
3. OCP:	
Set PR8109=402Kohm	
Iocp=8.74A	
4. Soft start time:	
Tss=2ms	
5.Inrush Current:	
C total = 100 uF	
I inrush= 0.165 A	

Controller	+5VSUS
